

Press Release, Netherlands, February, 2016

TWCO Technical Watches.

Introducing: the Sea Rescue Diver 'Tactical model' DLC coated!

It was only end of 2012 that TWCO Technical Watches could introduce the first model of their Sea Rescue Diver range the 'Orange', a Yellow version followed soon after.

And now it's time to go BLACK!

"We are very pleased to see that the Sea Rescue Diver range is received so well in the market. The result is the expansion of this range with a DLC black coated version, the 'Tactical Model'. The Sea Rescue Diver is now available in Orange, Yellow and BLACK" Says Robbert Suurland, owner.

The Sea Rescue Diver series, Orange, Yellow and now also in BLACK is a classic divers watch made from surgical 316L Stainless Steel. Sapphire crystal, double anti-reflective coating on the inside, high quality mechanical movement and overall finish to a high standard. Obviously water-resistant to 600m deep (60ATM), equipped with a very solid unidirectional bezel and a large easy to read minute hand. In short, a professional watch for both the professional and the aficionado. In addition, each TWCO has some special design features.

The TWCO Sea Rescue Diver range has the so-called "3 minute radio silence markers". See below for a description of these but also for the detailed technical specification.

TWCO
