

TWCO double lug holes explained.

The TWCO Sea Rescue Diver is equipped with double lug holes.

Here is the reason behind the double lug holes.
Please see the first picture to see the double lug holes.

Picture 1

First of all I can inform you on the fact that both the TWCO SS bracelet and the TWCO Silicon straps use the lower lug holes.

Now why did we provide the lugs with an extra pair of lug holes?

The reason is simply and only aesthetic. If you would like to put on another strap, say for instance a NATO or a leather strap, it simply looks better if you use the top lug holes.

To show you the difference I have added the following 2 pictures.

Picture 2 shows how it looks when you use the lower lug holes.

Picture 3 shows how it looks when you use the top lug holes.

Picture 2

Picture 3

Although a matter of taste, in our opinion it simply looks better when you use the top lug holes for other straps.
However the choice is yours and at least you have something to choose!

Pictures 2 and 3 are taken with a NATO strap, if you put on a leather strap you will see the difference even better.
